FOR YOUR INFORMATION - Childhood vaccines

The following are the routine vaccinations that are offered free of charge on the NHS to all babies and children in the UK.

To check the most up-to-date information please check

<http://www.nhs.uk/Planners/vaccinations/Pages/childvaccines.aspx>

This is the current immunisation schedule- older children will have been on different schedules.

PLEASE CHECK THAT YOUR CHILD IS UP TO DATE WITH VACCINES AND IF NOT DISCUSS WITH A RECEPTIONIST

DTaP/IPV/Hib or 5-in-1 vaccine

Protects against: diphtheria, tetanus, pertussis (whooping cough), polio and Hib (haemophilus influenza type B).

Given at: 2, 3 and 4 months of age.

Pneumococcal (PCV)

Protects against: some types of pneumococcal infection.

Given at: 2, 4 and 12-13 months of age.

Meningitis C (MenC)

Protects against: meningitis C (meningococcal type C).

Given at: 3 and 4 months of age.

Hib/MenC (booster)

Protects against: haemophilus influenza type b (Hib) and meningitis C.

Given at: 12-13 months of age.

MMR

Protects against: measles, mumps and rubella.

Given at: 12-13 months and at 3 years and 4 months of age, or sometime thereafter.

DTaP/IPV (or dTaP/IPV) 'pre-school' booster

Protects against: diphtheria, tetanus, pertussis (whooping cough) and polio.

Given at: 3 years and 4 months of age or shortly thereafter.

Optional vaccinations

These vaccinations are offered, in addition to the routine programme, to special 'at risk' groups of babies and children.

Chickenpox (varicella) vaccination

Protects against: chickenpox.

Who needs it: siblings of children who have suppressed immune systems and are susceptible to chickenpox, for example, because they're having cancer treatment or have had an organ transplant. **Given:** from one year of age upwards (one dose for children from one year to 12 years. Two doses given 4-8 weeks apart for children aged 13 years or older).

BCG (tuberculosis) vaccination

Protects against: tuberculosis (TB).

Who needs it: babies and children who have a high chance of coming into contact with tuberculosis.

Given: from birth to 16 years of age.

Flu vaccination

Protects against: flu.

Who needs it: children with certain medical conditions or a weakened immune system, which may put them at risk of complications from flu.

Given: from six months and over in a single jab every year in October/November.

Hepatitis B vaccination

Protects against: hepatitis B.

Who needs it: children at high risk of exposure to hepatitis B, and babies born to infected mothers.

Given: at any age, as four doses given over 12 months. A baby born to a mother infected with hepatitis B will be offered a dose at birth, one month of age, 2 months of age and one year of age.
